

**eSIGHT IS A GAME-CHANGER
FOR THOSE LIVING WITH
LOW VISION**

INSTANT SIGHT

Instantaneous auto-focusing between short-range vision (reading a text message), mid-range vision (watching TV) and long-range vision (looking outside a window) with virtually no delay.

WEARABLE

Comfortable, wearable and hands-free device that allows legally blind individuals to use both of their hands while they use eSight to see.

ENABLES MOBILITY

Provides true mobility so that a legally blind individual can use eSight to be independently mobile, from walking and exercising to commuting, studying, working and travelling.

**A DAY WILL COME WHEN
THE LEGALLY BLIND CAN
ACTUALLY SEE.**

THAT DAY IS TODAY.

**Speak with an eSight
Vision Advocate today.**

EVERYONE DESERVES TO SEE

eSight works for a variety of visual impairments, including:

Macular Degeneration	Diabetic Retinopathy
Stargardt's Disease	Ocular Albinism
Optic Atrophy	Optic Nerve Hypoplasia
Cone-Rod Dystrophy	Nystagmus
Glaucoma	Retinopathy of Prematurity

And more, which we continue to research solutions for every day.

LIVE...

Engage in virtually all Activities of Daily Living. See the faces of loved ones (often for the first time), read, watch TV, resume previously abandoned hobbies and so much more!

USE eSIGHT TO:

STUDY...

Fully participate in academic life. View the board from any seat in the class. Study and socialize with confidence and move independently between buildings and events.

WORK...

Use eSight to thrive in the workplace, whether in a factory or an office. Lead meetings, travel and commute, use a variety of tools and technologies and collaborate with confidence.

eSight has changed my life. It has helped me grow my career and live the life I want to live.

**— YVONNE FELIX
eSight User**

HOW IT WORKS

eSight uses cutting edge technology to enhance functional vision for the legally blind.

- 1** The device's high-speed, high-resolution camera captures what a user is looking at in real time.
- 2** eSight's algorithm enhances the video and projects it on two OLED screens in front of the user's eyes.
- 3** Full color video images are seen by the user with amazing visual clarity and no perceptible delay.
