

Breathe-Happy Face Masks for personal protection.

I have used a wide range of masks since the COVID began and thus quite experienced in the use of different masks. Breathe Happy Masks are a new development of mask that I have adopted for use at home and in the hospital and theatre. I have found the Breathe-Happy masks to be far more comfortable and far more effective, less glasses steaming etc than the traditional Hospital or cloth masks. For everyday the 95 filters are easier to breath and sufficient, for hospital or very crowded places the 98 is a finer filter and is the one I use in hospital or in theatre. (I have no commercial interest.)

Breathe-Happy can be purchased direct from their web site
